N102   For any ship to locations that represent AWG store locations, the name and address information has not been previously provided. Therefore, AWG will send the ship to name in this element and will additionally send the N3 and N4 segments to fully identify the ship locations.

N104 The code shown in the N104 segment will be AWG's DUNS number followed by a 4 digit suffix to represent the physical location of the ship to facility. If the ship to location is a store, the code in N104 will be AWG's DUNS number followed by the AWG assigned store number. This suffix can be established in your system as the unique identifier of the ship to location.
