Dear Trading Partner,

We have made some modifications to our current 850 Purchase Order Document. The attached implementation guide contains the changes that have been made, below is a brief description of these changes.

Page 11/12 – we have removed the DTM 001 segment, this segment should no longer be used. The DTM 038 segment will represent the Cancel date on the PO.

Page 18 – we have added an additional CTP segment, this segment will contain the List Price (i.e. Suggested Price / Compare At / MSRP) for the style.

Page 21 - we have added an N9 segment, which contains Bob's season code. The Season code is a 3 digit number that represents the selling season (0-9) and the 2 digit year number (i.e. 105 = spring 2005).

Page 22 – we have added two more N9 segment, which will contain Bob's Style ID1and Style ID2. Style ID1 will represent the pricing strategy that is being assigned to the style. Style ID2 has been mapped for future use. This filed may or may not be sent depending on if it has been assigned at the style level. If you receive data in this field please disregard.

Once you have completed the mapping changes and you are ready to test a document please contact Maria Mitchell at mmitchell@bobstores.com.
